Mini-Playfield Opto-Switch Cover

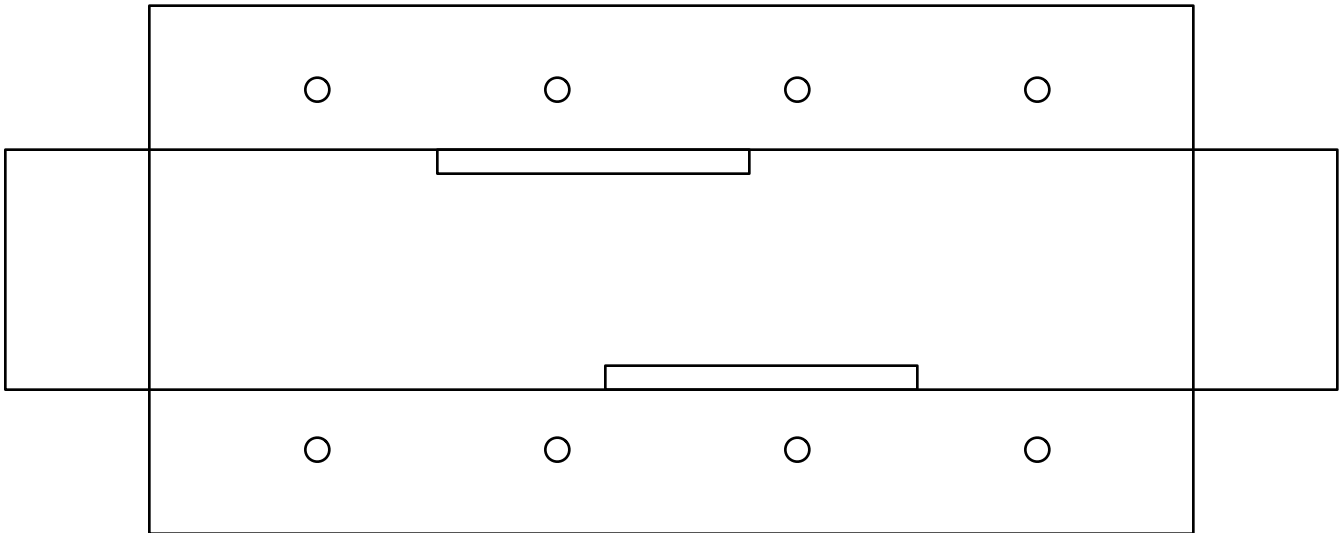

Template

I created a template for creating a new paper cover for the opto bank on the mini-playfield (that shields it from light). Mine was in poor shape, so I created this template to scale to create another one. I thought others may find it useful.

Important:

Make this out of heavy black paper or "fish" paper.

Using white or light colored paper causes reflection and will cause problems with your opto receivers.

Turn off any printer scaling (make sure it is set to 100%)
